PROFESSIONAL SUMMARY

Software Engineer II with 2+ years of experience designing and delivering scalable web systems in production healthcare environments. Experienced in frontend architecture, multi-tenant platform design, and config-driven system patterns. Seeking roles where technical depth meets product impact — with a long-term direction toward solutions architecture and technical leadership.

EXPERIENCE

Software Engineer II, Veersa Technologies – Noida, India | Jan 2026 – Present

- Architected a **configurable, rule-based field behavior system** in React/Redux, enabling non-technical administrators to define conditional logic that dynamically disables form fields based on live runtime data — with support for nested data traversal, case-insensitive matching, and multi-condition group evaluation
- Contributed to an **AI-assisted development initiative**, observing real-world agent usage patterns across the team to define modular and compound skills structured as a skill tree — enabling more consistent and reusable AI-assisted workflows in the development process.
- Architected and delivered **production-stable frontend modules** across release cycles in a high-compliance healthcare environment, maintaining zero critical defects in production.
- Led a team of interns in a full **architectural migration from WordPress to React**, establishing reusable component standards and code review workflows that improved delivery consistency and long-term maintainability.
- Drove measurable **frontend performance improvements**: Lighthouse **Performance score increased from 38 to 68**, **Accessibility from 90 to 92**, achieving perfect scores in Best Practices and SEO — across mobile, tablet, and desktop.
- Designed and implemented **YAML-based CI/CD pipeline configurations**, streamlining release workflows and reducing deployment inconsistency..

Software Engineer, Veersa Technologies – Noida, India | Aug 2024 – Dec 2025

- Contributed to architecture and development of a **multi-tenant CRM platform** serving 4 enterprise tenants and managing 100,000+ healthcare cases, enabling dynamic schema creation and workflow-driven data capture at scale.
- Designed and implemented a **config-driven Rule and Eligibility Engine**, allowing administrators to define complex conditional logic (if X + Y → Z) through structured inputs — eliminating hardcoded business rules and improving system flexibility.
- Architected a **dynamic schema rendering system** in the Agent Portal that interpreted backend-driven configurations in real time, ensuring admin-defined rules reflected instantly across all workflows without frontend redeployment.
- Engineered **normalized Redux state management** using Redux Toolkit and Redux Saga to handle complex cross-portal asynchronous flows, dynamic rule evaluation, and multi-tenant data isolation.

Software Engineer Intern, Veersa Technologies – Noida, India | Sep 2023 – Aug 2024

- Contributed to development of the **viSMS portal**, building responsive UI workflows and managing complex global state transitions using React.js and Redux Toolkit in a production healthcare environment.
- Applied systematic **React performance optimizations** — including memoization, code splitting, and lazy loading — reducing initial load times by **43%** and significantly improving end-user experience across the portal.

PROJECTS

PixMailer | React.js, Node.js, Express.js

- Designed and built a **full-stack email personalization platform**, implementing a React frontend with an Express.js REST API backend for dynamic recipient management and targeted email dispatch.
- Engineered a **tagging and segmentation system** to categorize recipients onboarded from multiple sources, enabling precise group-based email targeting.

EDUCATION

Maharaja Surajmal Institute of Technology | Sep 2020 – July 2024

B.Tech in Information Technology | GPA: 9.5/10.0

Coursework: Operating Systems, Computer Networks, Database Management Systems, Object Oriented Programming

SKILLS & TECHNOLOGIES

Frontend: React.js, Redux Toolkit, Redux Saga, Tailwind CSS, HTML5, CSS3, JSON

Backend: Node.js, Express.js, REST APIs

Languages: JavaScript, TypeScript, Java, MySQL, MongoDB

Architecture & Concepts: Multi-Tenant Systems, Config-Driven Architecture, Dynamic Schema Rendering, State Management, Performance Optimization, CI/CD

Tools: GitHub, Azure DevOps, Postman, VS Code, Cursor AI, Claude
